Professional Summary

Full Stack Developer with 4+ years of experience in banking and financial services, building scalable systems using Java, Spring Boot, React.js, and microservices. Skilled in secure payment workflows, transaction processing, RESTful API design, and distributed systems — achieving up to 40% latency reduction on platforms handling 1M+ requests/day. Strong foundation in data structures, algorithms, and software design. AWS Certified, with hands-on CI/CD, cloud-native delivery, and working familiarity with LLM-powered development tools in Agile environments.

Technical Skills

Languages: Java, JavaScript, TypeScript, Scala, HTML5, CSS3

Frontend: React.js, Redux, Tailwind CSS, Bootstrap

Backend: Spring Boot, Spring Cloud, Hibernate, RESTful APIs, Microservices

Databases: MySQL, PostgreSQL, SQL Server, Redis, MongoDB

Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins, GitLab, CI/CD

Testing & Tools: JUnit, Mockito, Jest, JMeter, SonarQube, Dynatrace, Postman

AI & Tooling: Amazon Q, GitHub Copilot, LLM-assisted development, prompt engineering basics

Professional Experience

Software Engineering Professional | British Telecom, Bangalore, India *Apr 2025 – Present*

- Architected distributed Spring Boot microservices with event-driven inter-service communication and multistep workflow orchestration, sustaining zero-downtime operations across systems processing 1M+ requests/day.
- Designed RESTful API contracts with Swagger documentation, reducing external developer onboarding time by 40%; optimised backend performance via Redis caching and SQL query tuning, cutting latency by 30–35%.
- Built fault-tolerant systems using Resilience4j and Spring Security (RBAC); implemented end-to-end observability with Dynatrace, reducing MTTR by 35% and achieving 95%+ test coverage via JUnit/Mockito + SonarQube.
- Containerised services with Docker/Kubernetes and automated delivery through Jenkins/GitLab CI/CD pipelines in Agile/Scrum environments; leveraged Amazon Q and GitHub Copilot to accelerate feature delivery by ~30%.
- Built scalable React.js applications using Redux and Tailwind CSS; reduced initial load time by 30% through lazy loading, code splitting, and memoization.

Software Engineer | Cognizant Technology Solutions, Kolkata, India *Dec 2021 – Apr 2025*

- Delivered end-to-end features across banking and financial services — payment processing, transaction management, customer self-service — using Spring Boot, React.js, and SQL Server; improved feature delivery speed by 25%.
- Built and optimised RESTful APIs for high-traffic financial modules with JWT + Spring Security RBAC, meeting financial-grade security requirements and ensuring reliable, consistent request handling.
- Designed optimised SQL queries and schema updates in SQL Server and MongoDB; led backend migration from Scala to Spring Boot, reducing code complexity and improving onboarding time by 20–25%.
- Developed reusable React.js component libraries and managed complex global state (payments, sessions) via Redux; reduced unnecessary API calls by 15–20% through pagination, debouncing, and throttling.
- Collaborated with business stakeholders to gather requirements, facilitate process workflow design, and translate needs into technical specifications across Agile sprint cycles.

Education

Bachelor of Technology — Computer Science

Aug 2017 – Aug 2020

Heritage Institute of Technology, Kolkata, India

Certifications

- AWS Certified Cloud Practitioner
- AWS Partner: Generative AI on AWS Essentials (Business)
- Amazon CodeWhisperer: Getting Started
- SRE Program — Certificate of Completion (Site Reliability Engineering)
