PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years of experience building scalable, high-performance applications using Java, Spring Boot, React.js, and microservices architecture. Expertise in RESTful APIs, distributed systems, and performance optimization, achieving up to 40% latency reduction and supporting systems handling 1M+ requests/day. Proficient in CI/CD, cloud-native development, and designing secure, fault-tolerant systems in Agile environments.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, HTML5, CSS3

Frontend: React.js, Redux, Tailwind CSS, Bootstrap

Backend: Spring Boot, Spring Cloud, Hibernate, REST APIs

Databases: MySQL, PostgreSQL

Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins, GitLab, CI/CD

Testing & Tools: Maven, Vite, Git, Eclipse/STS, Postman, Jest, JUnit, Mockito, SonarQube, JMeter, Dynatrace

PROFESSIONAL EXPERIENCE

Software Engineering Professional | British Telecom | Bangalore, India

Apr 2025 – Present

- Architected and owned distributed Spring Boot microservices using a layered architecture and Spring Cloud, designing multistep workflow orchestration with controlled state transitions and event-driven inter-service communication, sustaining zero-downtime operations across systems processing 1M+ requests/day.
- Designed and enforced RESTful API contracts with comprehensive Swagger documentation, enabling seamless third-party integrations and reducing external developer onboarding time by 40% through self-service API exploration.
- Drove Optimized backend performance using Redis caching and SQL Server query tuning, identifying bottlenecks through analysis and validating improvements with JMeter load testing, reducing API latency by 30–35% and improving overall response time by 20–25%.
- Built fault-tolerant and secure systems using Resilience4j and Spring Security with RBAC, maintaining high availability and zero critical security incidents under sustained heavy traffic.
- Implemented end-to-end observability using Dynatrace for distributed tracing, real-time alerting, and root cause analysis, reducing mean time to resolution by 35% and improving system reliability across services.
- Enforced code quality and reliability by implementing unit and integration tests using JUnit and Mockito, achieving 95%+ code coverage and integrating with SonarQube for continuous quality gates with zero critical violations in production.
- Containerized microservices using Docker & orchestrated deployments on Kubernetes, automating delivery through CI/CD pipelines using Jenkins and GitLab in Agile/Scrum environments.
- Leveraged AI-assisted development tools including Amazon Q and GitHub Copilot for code generation and automated refactoring, reducing development effort and accelerating feature delivery by 30%.
- Architected scalable React.js applications using Redux and Tailwind CSS, building reusable component libraries and managing complex global state and asynchronous data flows integrated with backend REST APIs.
- Optimized frontend performance through lazy loading, code splitting, and memoization, reducing initial load time by 30% and improving responsiveness for high-traffic workflows serving 1M+ concurrent users.

Software Engineer | Cognizant Technology Solutions | Kolkata, India

Dec 2021 – Apr 2025

- Delivered end-to-end enterprise features across banking, telecom services, and customer self-service domains using Spring Boot, React, and SQL Server, contributing across backend services, UI, and data layers, improving feature delivery speed by 25%.
- Developed and optimized RESTful APIs using Spring Boot, implementing robust business logic, validation, and efficient database interactions to support high-traffic modules with reliable request handling.
- Implemented secure authentication and authorization using JWT and Spring Security, enabling role-based access control across application features and improving application security.
- Designed and executed optimized SQL queries and schema-level updates in SQL Server, improving data retrieval efficiency and maintaining data consistency across modules.
- Led backend migration from Scala to Spring Boot, re-architecting services into a layered structure, reducing code complexity and improving developer onboarding time by 20-25%.
- Built scalable and responsive user interfaces using React.js, Tailwind CSS, and modern JavaScript, improving user experience across complex UI.
- Developed reusable and modular component libraries, reducing development effort by 20% and ensuring UI consistency across features.

- Managed complex global state using Redux, designing predictable state transitions and normalized data structures across modules such as cart, payments, and user sessions.
- Optimized data-heavy workflows by implementing pagination, sorting, debouncing, and throttling across UI and API layers, reducing unnecessary API calls by 15-20% and improving performance.
- Designed and implemented API integration layers using Axios, including centralized configuration, interceptors, and standardized error handling for reliable data flow.
- Ensured seamless frontend-backend integration by aligning API contracts and handling edge cases across distributed modules, reducing integration issues and improving system stability.

EDUCATION

Bachelor of Technology – Computer Science

Aug 2017 – Aug 2020

Heritage Institute of Technology, Kolkata, India

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- AWS Partner: Generative AI on AWS Essentials (Business)
- Amazon CodeWhisperer: Getting Started
- SRE Program – Certificate of Completion (Site Reliability Engineering Skillset)
